Serial No.

D.O. no 11 & 3.1.1927 to Revenue Comr
Forwards the report of 30.11.26 from the Deputy Comr referred to above

Report on the ill-health in Surendja town its surrounding villages and the action taken to restore healthy conditions

2) The Sanitary Comr has stated that from the report it is seen that rumours have been magnified out of all proportion to the actual state of things. The higher incidence of malaria this year is due to the unusually heavy monsoon which prevailed. The report also shows that Cholera broke out in the Surendja town in a sporadic form & accounted till the date of report for 26 attacks & 14 deaths

The Public Health is usually bad from October to December each year but

3) The report brings two things into prominence
1) difficulties caused from the non-receipt of proper health reports from the Taluk & village Revenue authorities
2) The need for the improvement of the Isolation Hospital at Surendja.

With regard to the 1st, kind reference is invited to rules 3, 4 & 17 of the rules for the combating of epidemics (Pc no G. 2137-1602-San 10-17-12 & 25-3-13)

4) The Sanitary Commissioner's suggestions mentioned in paras 3 & 4 of the report may if approved be sent to the Revenue Comr & the Deputy Comr for information & needful action

D.O.No. 11/[illegible]

Dear Sir,

Referring to your D.O. letter No.17/24-25 dated 20th November 1924 reporting of the prevalence of Malarial Fever in several villages of Sorab Taluk etc. I request you to kindly address the Senior Surgeon regarding the additional medical help required to combat the spread of the disease; you are also requested to provide all possible facilities for harvesting the crops. Whether wet and dry crops were not actually harvested in any of the Taluks for want of labour may also be reported in due course

Yours Sincerely,
SD.K.Chandy.

Office of the ~~Deputy~~ Commissioner,
Shimoga District,
Dated Shimoga 20th November 1924.

D.O. 17 /24-25.

Dear Sir,

With reference to your D.O.dated 19th November 1924 - (No.D.11/24-25) re:reports of great sickness in Shimoga and other Taluks. I write to state that till now the Sub-Assistant Surgeon, Sorab, has reported that Malarial Fever is prevailing in several villages of the Sorab Taluk and that some assistance should be given to the rustics in the harvest season. This report has been received through the District Medical officer and the Amildar has been asked to submit a detailed report ~~in the report~~ suggesting the measures that he likes to be adopted in those places. No other Taluk has reported any such cases.

It is regrettable that Cholera cases have been occurring at Mandali a suburb of Shimoga. I visited the place both yesterday and to-day and have taken all precautionary measures to arrest the spreading of the epidemic as the locality is situated close to the Pumping Station.

25. NOV. 1924

However, I have written this day to all Amildars to report to me immediately as to the condition of public health in their Taluks especially in rural parts, and will report to you as to the result after the receipt of the information from the Amildars.

Yours sincerely,.

K.Chandy Esq., B.A.,
Revenue Commissioner in Mysore, Bangalore.

Dear Sir,

In continuation of this Office Memo No. D.11 of 24-25 dated 24th November 1924 forwarding Shimoga Deputy Commissioner's D.O. letter dated 20th November 1924 regarding sickness prevailing in Shimoga and other Taluks, I forward herewith copy of letter No.17 of 24-25 dated 30th November 1924 from the Deputy Commissioner submitting a further report in the matter. It is seen therefrom that Malarial fever was somewhat severe this year on account of excessive rainfall in the - - months of July and August last, though mortality was not heavy. It is reported that the harvesting of paddy has been completed in the Taluks of Sorab, Sagar, Nagar and partly in the Taluks of Shimoga, Shikarpur and Thirthahalli and that the harvesting of Ragi has not yet been taken up in Honnali Taluk. Cholera also is prevailing in - - Shimoga Taluk. Medical relief is however being

P.T.O.

being ~~taken~~ given to the people.

Yours Sincerely,

V. Chandy

To

Bangalore.

D.O.Letter No.17 of 24-25 dated 30th November 1924 from the Deputy Commissioner, Shimoga District to the Revenue Commissioner in Mysore.

In continuation of my letter No.17 dated 20th November 1924 reporting the state of health in the taluks of this District, I beg to state that I visited all the Taluk Head-Quarters and several villages and made enquiries with regard to the health of the people, the state of standing crops, and the progress in the harvesting operations. I have also looked into the various Local Fund Dispensaries at theTaluk Head-Quarter to ascertain if any abnormal sickness was prevailing in any locality. I learnt from the Local Officers that to some extent Malarial Fever was somewhat severe this year and a larger number of people suffered on account of excessive rain-fall in the months of July and August last, but the mortality was not heavy. In the Malnad area, harvesting of paddy has been completed in the taluks of Sorab, Sagar, Nagar and partly in the taluks of Shimoga, Shikarpur and Thirthahalli. In the taluk of Honnali, the harvesting of Ragi has not yet been taken up. I could see that the admissions from Malaria in the Dispensaries of Sorab and Shikarpur were nearly twice or thrice what it was in the previous two years, but the sickness does not in the least interfere with the harvesting operations. The report of Honnali taluk was somewhat exaggerated. As compared with the Malnad taluks, the sickness in the Honnali taluk was less and as usual, in two or three villages, relapsing fever was prevailing for the last five or six months. I also visited Kumbaloor in the Honnali taluk in the month of July last with the Sub Assisstant Surgeon and got the people treated by him. It is a matter of satisfaction that the people themselves come forward for taking Salversan injections which proved so effective in these cases. The Senior Surgeon also

visited Shimoga and a few villages on the Honnali road. It is rather unfortunate that stray cases of Cholera are occurring in the Town of Shimoga and so far, about 10 cases have ended fatally. Allpossible precautionery measures are being adopted to prevent the spread of the epidemic. The water in the filter.bed has been declared free from Cholera-bacilli by the Health Institute and I am confident that the disease will not assume an epidemic form. On the whole, I beg to state for your information and the information of Government that there is no reason for any anxiety or alarm and the villages from which reports of prevalance of fevers are received, are being visited and Medical aid given. I have also instructed the Vice-Presidents of the Taluk Boards of Shikarpur and Sorab to sanction some amounts from the Taluk Boards, as well as from the Municipal Funds, for purchasing Quinine for free distribution among the raiyats, for which there is great demand.

The Senior Surgeon has been satisfied with the arrangements made as regards the prophylactic adopted for the Cholera and other diseases in the town of Shimoga and other places.

Offg. Sanitary Commissioner with the Government of
H. H. the Maharaja of Mysore, BANGALORE.

To

P. Nagappa, Esqr., Bar-at-law
Secretary to the Government of His Highness
the Maharaja of Mysore, Local & Legis
Departments, Bangalore

Sir

With reference to your letter no. L.5858/San 1-34-18 dated the 25th November 1934, I have the honour to state that the purport of your letter having been intimated by my Office by wire to me to Kadur on the 26th idem, I immediat proceeded from there to Shimoga to study the situation and see to the special measures, if any, needed to combat it. I interviewed the Deputy Commissioner and visited some villages on the Shimoga-Honnali road which rumour credited with bad prevalence of fevers. The conditions were found normal in two of the villages seen while in the other two there were only a few cases of malaria and fewer cases of relapsing fever. The District Medical Officer has been rapidly itinerating in the District and Medical Subordinates have been instructed to lose no time in proceeding to the affected Villages immediately on receipt of news of any unusual morbidity within their jurisdiction. The consensus of the reports I have had is that the rumours have been magnified out of all proportion to the actual state of things. I the Amildar of Honnali who reported to me that there nothing alarming in the condition of public health

Enclosure No

SUBJECT.

It has been my experience during my stay as District Medical Officer in the Shimoga District for over seven years, that a well-defined period - commencing from the latter part of October and running into the middle of December - is always associated in the Malnad with a marked increase in the prevalence of malarial fevers. This is also borne out by the recorded annual statistics Only, this year the dispensary registers reveal a somewhat higher incidence of malaria as compared with the preceding three years - a natural sequel to the unusually heavy monsoon which prevailed and which helped to numerically swell the breeding places of mosquitoes.

2 The actual health conditions at present may be summed up as follows:

Five Villages in Shikarpur Taluk are infected with re lapsing fever. The disease has almost subsided however. Only one Village Nimbalahalli is actively infected. In Sorab Taluk taking three year's statistics, malaria is more prevalent which as already stated is due to the heavy monsoon this year. A list of Villages in the Honnali and Shikarpur Taluks affected with Plague, Malaria or relapsing fever is enclosed for information

A Sub Assistant Surgeon has been posted for special duty in the Honnali Taluk. The District Medical Officer himself has visited some of the Villages and brought blood smears for bacteriological examination. An additional Sub Assistant Surgeon has also been posted for duty in the Southern portions of Honnali Taluk and adjoining parts of Shikarpur and Sorab Taluks, with instructions to make his head quarters at Shoulange for one week visit daily all the three infected villages (Viz., Joga, Chunnil and Bilesgutty) and after the week is over, to move on to Shik to work between Shikarpur and Sorab Taluks. Inoculation and neo salvarsan injections have been started briskly in the affected Taluks

3.It was reported that in the Malnad area, harvesting of paddy had been carried out completely in the Taluks of Sorab Nagar, and partially in the Taluks of Shimoga, Shikarpur and

Thirthahalli

Hirihalli. In Honhalli harvesting of ragi had not commenced

4. As already stated above, the Medical Subordinates have been instructed to visit affected areas as often as possible and render medical aid I have also satisfied myself that quinine and Chinchona febrifuge are adequately stocked in every dispensary Instructions have been issued to the Medical Stores directing prompt compliance with indents for extra medicines received from the District

In this connection, I beg to bring to the notice of Govt that prompt medical relief is greatly hampered by the failure on the part of the Local Revenue authorities to give timely intimation to the Medical Officer or subordinate concerned. In the majority of the cases in which medical aid has been rendered the Sub Assistant Surgeons have had to take upon themselves the responsibility of visiting the Villages on information casually received instead of on formal, authentic reports sent up by the Patel or other local authority. This is of course an unsatisfactory state of affairs and needs to be remedied. I may instance the case of Chilur in which if any credence could be given to unauthenticated rumour, nearly 60 deaths were stated to have occurred among the Mussulman and Lingayet communities, - although until now there has been no report from the Amildar to that effect. The District Medical Officer visited the Village on three occasions and found nothing beyond four cases of Chronic Malaria, two cases of simple fever and one of pleurisy - all of which he treated. The non-receipt of correct and timely intimation from the local authorities thus handicaps the Medical Officer or subordinate in various ways, tends to dissipate his work and retards the adoption of preventive and relief measures. I request suitable orders may kindly be issued with a view to bring about better regulation in the procedure connected with local reports of out-break of epidemic or other diseases.

5. In the Shimoga Town Cholera broke out in a sporadic form on the 18th November and has uptodate accounted for 36 attacks with 14 deaths The following is the District Medical Officer's rep

dated the 26th November 1934 regarding the origin of the disease: " In a Village Mandli by name, situated on the banks of the river and within the Municipal limits, the first eight cases of cholera occurred with four deaths from the 18th to 25th of this month. Sporadic cases since then began to appear in the heart of the town, in one street or another. Arakere Village, a few furlongs away from the Mandli Village, has been one of the sources of infection. Three weeks ago, a Brahmin patient suffering from cholera died in this Village and his body was thrown into the Tunga River. A few days later, the first cases of cholera occurred in the Mandli Village, which is situated on the right River Bank. Moreover the people of Mandli constantly go to the Arakere Village and return. Milkmen from Arakere sell milk and other products in the Shimoga Town."

I inspected the affected localities, saw all the convalescent cases and issued necessary instructions in regard to the measures to be adopted. I also arranged to post a Police Cordon along the bank of the river to prevent people from resorting to the river until the danger of the spread of infection is past. In my experience as District Medical and Sanitary Officer of the District, this method was most effective in arresting the spread of Cholera in the Town. Anti-Cholera inoculation has also been started. All the wells in the affected neighbourhood have been hankinised. Two additional public taps have been provided in Mandli, and the epidemic has subsided there. The Chief Sanitary Inspector as well as the Town Sanitary Inspector have been directed to work in the affected area. A Sub Assistant Surgeon has been posted for special cholera duty in the town and has been making house-to-house visits in the affected localities and treating the patients. Arrangement has also been made for the treatment of patients at the Isolation Hospital.

In this connection, I would urge the need to place this Institution on a workable basis. The existing Isolation "Wards" are antiquated structures and are quite

unsuitable. Proper equipment and adequate establishment should be provided. It would be futile to expect efficiency of the preventive and relief measures otherwise. It is a pity that such an important institution as an infectious diseases Hospital has so long been neglected in a town which is growing in importance and in which the out-break of epidemic diseases is an almost yearly occurrence.

6. Reports since received show that a few cases of cholera have occurred recently at Bhadravati. Necessary preventive measures are being adopted at Bhadravati and anti-cholera inoculations will also be started as soon as a supply of vaccine for which an indent has been sent by wire, @@ is received from Kasauli.

7. I am proceeding again to the Shimoga District, in connection with annual inspections, during the latter part of this month and shall avail myself of the opportunity to examine the conditions in more detail and initiate further measures, if any are called for.

I have the honor to be

Sir,

Your most obedient servant

SANITARY COMMISSIONER. M. G.
